Re: If you build it, will they come? (FL) Posted by Big Dog - 30 Jun 2011 20:43

## 944-SPEC - 944SPEC - low cost wheel to wheel racing Generated: 6 July, 2025, 01:35 If you are concerned about cooling, the oil cooler should not be in front of the radiator as that puts more heat into the radiator. Mine is on the right side and gets air from the fog light opening in the bumper and the light well in the valence, with silicon duct material, and some all ducting too, it works great. If you do not know the provenance of the radiator, I would advise replacing it with a turbo radiator and be done with any heating issues. Big Dog Re: If you build it, will they come? (FL) Posted by UFfitz56 - 01 Jul 2011 13:33 Yea I have no room there if you look at the pic on page 2. Plus the oil cooler is about as wide as the radiator. Re: If you build it, will they come? (FL) Posted by Sterling Doc - 02 Jul 2011 06:32 That fan has a CFM around 1200. Spal makes a 1700 CFM 13" fan. This is what I run, and I

wouldn't go less for a single fan set up. There is a good deal on them here, which is where I got mine: <a href="https://www.the-fan-man.com/shop/size-pull-part-...-p-204.html?cPath=33">www.the-fan-man.com/shop/size-pull-part-...-p-204.html?cPath=33</a>
