

Wheel Spin Help

Posted by RacerX - 27 Nov 2013 18:56

Going around some corners I noticed that I get wheel spin. I don't have an LSD. Aside from installing one, what can I do to help minimize the wheel spin?

Go as soft as possible with your sway bars.

Rear sway and shocks are set at their softest setting already.

Stiffening the front is next.

There is nothing more to be done without LSD. If you stiffen the front, you simply make the car push more forcing a lift of the throttle. In the end, it will slow down your lap time.

Your only approach is to use throttle control to get as much as you can get without spinning the inside tire too much. Actually a little spin can help rotate the car but not that much. You can only do what you can do so be aware of the spin and minimize it.
