

Baseline Alignment Specs?

Posted by Kerry Chadderton - 27 Jul 2014 12:41

I have finished my new suspension install and I'd like your opinions on good, general alignment specs to start out with while I shake it down and get the feel for the new setup. I'd like shock, caster, camber, toe and swaybar settings.

I have the "Paragon SPEC-1" kit:

Koni adjustables

350lb Springs

30mm T-bars

Weltmeister 28mm solid front sway

Weltmeister 22mm solid rear sway

Poly bushings

Elephant Racing spring plate bearings

Thank you in advance! -Kerry

Thanks Steve. That makes me feel more secure.

As you know, many tracks try to squeeze out as much revenue out of every open day as possible. I guess I don't blame them. However that sometimes puts us (944, SM, E30, Boxster) out there with Vettes, GTRs, Ferrari 430s, GT3s, etc. It can get dicey.

I can't wait to move on to SPEC races and more tracks. My last race was an IT enduro at Road Atlanta in 1999. I'm working my ass off to get back. Soon....

Thanks again. -Kerry
