

new build questions

Posted by FastTater - 17 Nov 2011 10:42

I am starting the build of my 84 944 to use for spec racing next year. I have few questions:

What parts can I use from a 944 turbo 8v? What is the advantage? What are the most common modifications for an early low compression motor?

Thanks

Eric,

It's nice to know the Southeast division has not been written off by the rest of the series. I am the gentleman mentioned earlier that bought Michael Maduskes former racecar. My intentions were always to use it to get through the HPDE's and then get my license. So far I am on track having obtained my provisional at NCCAR earlier this month with my newly built 944Spec legal car. I have been working hard at getting the rest of the 944's in the region to complete their builds and join the fun. If you find yourself in this area over the winter please contact me so we can discuss this further.
